

## CASE STUDY:

### Legacy Survey Drafting

Adam Atkins | Owner & Operator

#### Software Replaced By SurvaCAD

Previously using BricsCAD Pro supported by a personally developed template, including customised linestyles, text styles and sizes, scale bars, notes, and drafting standards.

#### Challenge:

As workload increased, productivity couldn't keep up. Mr Atkins didn't initially see his drafting methods as inefficient but repetitive tasks like scaling station circles, rotating text, and dimensioning plans took excessive time.

#### Solution:

SurvaCAD installed easily over BricsCAD, introducing powerful tools that cut out repetitive steps. Mr Atkins found the Dimensioning Tool especially valuable, reducing tedious manual work into a single click. Other features like scaling station circles, rotating/ flipping text, and truncating corners streamlined the process.

#### Results:

SurvaCAD reduced drafting time significantly, improved presentation and consistency, and removed the frustration of repetitive tasks. Productivity increased, making drafting faster and more accurate.

#### Customer Feedback

"My main problem was, as my workload increased, my level of productivity wasn't able to keep up."

"SurvaCAD is definitely worth the investment. With a simple learning curve, you'll be producing plans quicker & more accurately in no time."

"SurvaCAD can't give you more time in your day, but it can help you achieve more in the time that you have."
